

Mobil Kontrol

Keep Track of Your Company's Smartphones

Mobil Kontrol is a mobile device management solution that lets you centrally manage and control your company's smartphones via a web portal.

You take your smartphone everywhere you go, but because they are so small and portable, they can easily be left behind, broken or stolen.

Mobil Kontrol lets your employees stay on the move with their company smartphones while keeping the confidential emails, calendars and documents in safe hands. Mobil Kontrol provides the same overview and high level of security for smartphones, as you would expect for company PCs and laptops.

Mobil Kontrol is a hosted solution and doesn't require any investment in IT hardware or software.

More Companies go Pure Mobile

Companies are increasingly switching away from fixed lines to purely mobile solutions. This trend has created all new mobile security needs.

Mobil Kontrol is the basis for a safe mobility strategy along with Telenor's Pure Mobile solutions and products for Unified Communications.

Increased Security with Mobil Kontrol

Remote Smartphone Locking

Has a smartphone gone missing?

Remotely lock your phone to prevent unauthorized access to the phone and its data.

Protect with auto-delete

Is a smartphone in the wrong hands?

If the pin code has been mis-typed a certain number of times, all content will be automatically deleted and the phone reset to factory settings.

Delete content

Has a smartphone been stolen?

Delete all data and content and reset the smartphone to factory settings by sending a kill-pill.

Track the SIM card

Which SIM card is in a smartphone?

The smartphone's number is registered every time it is switched on or off, and you can send security messages to the smartphone at all times.

Full Overview and Management with Mobil Kontrol

Mobil Kontrol enables the company administrator to create, maintain and secure data and information on the employees' smartphones.

- ➔ The administrator manages the company's smartphones through an accessible and secure user interface.
- ➔ All sessions are quickly executed from the system to the company smartphones, ensuring a high level of security.
- ➔ Safe login to the system, as the administrator receives a text message with a password for login.

Profile Manager

With a single keystroke, you automatically set up the smartphone with the company's predefined settings. With Profile Manager you can distribute settings to all of the company's smartphones simultaneously.

Group Handling

Do employees require different settings on their smartphones? Mobil Kontrol lets you group employees, so that everyone gets the settings they need.

File Manager

Upload files, wallpapers, apps, bookmarks etc. Send them collectively or separately to one or more employees

Reporting

Retrieve reports from the smartphones, and get an overview of installed programs and memory availability – or see which countries and phone numbers an individual employee calls most frequently or receives calls from.

Mobil Kontrol* supports the leading operating systems for smartphones, including:

Windows Mobile, Symbian, iOS, and Android.

* Mobil Kontrol is under continuous development and all common operating systems are supported. For support of specific versions, please contact Telenor.
